The False Narrative Takedown (TFNT) Series
Episode #3

Do the vaccines kill more people than they save?

Steve Kirsch
Executive Director
COVID-19 Early Treatment Fund

TFNT3

Upcoming takedowns

4. Steven A. Anderson (FDA safety monitoring)
5. John Su (CDC VAERS monitoring)
6. Grace Lee (ACIP committee chair)

Why are we mandating a drug which

1. Has not shown a statistically significant mortality benefit
2. Has shown a highly statistically significant increase in morbidity

These are the two inconvenient truths that nobody wants to talk about.

All-cause morbidity

From [Classen](#)

"Based on this data it is all but a certainty that mass COVID-19 immunization is hurting the health of the population in general. Scientific principles dictate that the mass immunization with COVID-19 vaccines must be halted immediately because we face a looming vaccine induced public health catastrophe."

See [Table 1](#) for details on all three vaccines.

lives saved from COVID

1 per 20,000 fully vaccinated people (per study) per 6 months

→ 10,000 lives saved/6 mo for 200M fully vaccinated people

net lives lost due to the vaccine

1 per 20,000 fully vaccinated people (per study) per 6 months

→ 10,000 lives lost/6 mo for 200M fully vaccinated people

Note: Both the saved and net numbers are not statistically significant.

Which means technically, Pfizer failed to show any all-cause death benefit during pre-unblinding AND post-unblinding phases.

The numbers from the study

Group	Morbidity (SAE)	COVID mortality	All-cause mortality
Placebo	176	2	14
Vaccine	283	1	**20**

Conclusions:
1. Highly statistically significant increase in morbidity.
2. No statistically significant difference in mortality (but if anything, trend is more likely to kill people than save them).
3. We expected 655,000/328,000,000*22,000*.5 = 22 heart attacks in each group. Got 1 in placebo. Seriously?!!? p < 0.00001. Gamed study.

Actual # lives cost (VAERS)
> 200,000 (see TFNT1)

For 12-17 kids, shows deaths from vaccine (574 based on 41 URF) > deaths from COVID (100)... likely >6X

Deaths from COVID expected = 1 per 100,000 * 10M = 100

We kill 6 kids for every kid we save from COVID.

Early treatments are better option

1. We don't know of anyone in the hospital today who started early treatment within 2 days of symptoms.
2. No need for masking, social distancing, lockdowns.
3. > 99% effective and work against all variants.
4. NIH is not interested. FDA and AMA are telling doctors not to use a drug with multiple systematic reviews

Summary

1. Vaccines will reduce COVID deaths, but deaths from the vaccine > COVID lives saved
2. The younger you are, the more ridiculous the vaccine mandates are. For kids, we kill 6 kids to save 1.
3. Early treatments are the superior alternative to vaccination.
