CDC and FDA committees should resign for failing to spot safety signals

Steve Kirsch
Executive Director
COVID-19 Early Treatment Fund
stk@treatearly.org
The FDA, CDC, all committee members ignored all the information I provided even after validated in papers published in medical journals.

See gab.com/stkirsch for some of these emails.
So-called “fact checkers” all refuse to do a recorded zoom call.
So now I will go direct.
Nobody is paying attention to the elephant in the room
Massive number of safety signals have been triggered
Massive number of safety signals have been triggered but nobody noticed
> 150K dead
# killed > # saved
Elevation of >1,000 severe adverse events
How mRNA vaccines work

Problems

1. mRNA goes everywhere
2. Spike is toxic
3. Amount, distribution, duration of spike is person dependent (depends on degradation of dose too)
4. NHP studies never done
5. Pregnancy studies never done
6. Original antigenic sin
7. Vaccine enhanced infectivity/replication (ADE superset)
DEATH
THE CDC SAYS “NO DEATHS” CAUSED BY THE VACCINE

The CDC is lying.

The committees haven’t called them on that.

The committee members should resign.
VISION TEST
Can you spot the unsafe vaccine? (nobody at the FDA or CDC can, including the advisory committees)
Dr. Peter Schirmacher

1. Chief pathologist at the University of Heidelberg
2. One of top 100 pathologists in the world
3. Member German National Academy of Sciences
4. h-index: 100 (38,730 citations)
5. Did autopsy on 40 people who died within 2 weeks of vaccine → “30% to 40% died from the vaccine”

→ “Nobody has died from the vaccine” is a lie.

Why isn’t this covered in the US mainstream media?

Reference: Chief pathologist insists on more autopsies of vaccinated people
Schirmacher validated

“The fine tissue analyses were performed by pathologists Prof. Dr. Arne Burkhardt and Prof. Dr. Walter Lang. The findings confirm Prof. Dr. Peter Schirmacher's finding that among more than 40 corpses he autopsied who had died within two weeks of COVID19 vaccination, approximately one-third of those deaths were caused by the vaccination.”

Someone is lying to you and it isn’t the Germans.

Norway also confirmed vaccine may cause deaths

1. 100 reported deaths in nursing home patients examined (87.7 avg age)
2. Using medical records alone:
   a. 10 cases: probable
   b. 26 cases: possible
   c. 59 cases: unlikely
   d. 5 cases: unclassifiable
3. The 36% possible number aligns with the 30% to 40% estimated by Schirmacher

The big question is: How are Schirmacher and Norway both able to determine causality in sample sizes of 40 or less, but the CDC can’t determine causality in a single case of the 14,000 deaths it investigated!?
To ponder...

Question: The Germans figured out the vaccine third dose was unsafe. How can it be perfectly safe for doses 1 and 2, but deadly on dose 3?

Answer: It can’t be. It’s the exact same vaccine. It’s always been deadly, but nobody was paying attention before.
D-dimer, Troponin
How can D-dimer be elevated for months after vaccination?!?

1. D-dimer is lagging indicator of blood clots.
2. **Hoffe**: >60% have elevated D-dimers. **That is not normal**.
3. Other doctors have confirmed these results
4. The elevation (e.g. levels @1500) can persist for 3 months. **That is not normal.**
CDC says vaccine-induced heart damage is “mild.” The troponin numbers show they are lying.

(These post-vax levels can be sustained for months and are absurdly high; there is no precedent for this)

Reference: Myocarditis after Covid-19 mRNA Vaccination
> 1,000 serious symptoms elevated
Adverse event table

This is a partial list of adverse events. Here is a more complete list.

Nearly every event was elevated.

Jessica Rose found over 10,000 event types.

No vaccine in history has this range of adverse events. It is unprecedented.

Note that the elevation of risk is often temporary, e.g., for cardiac arrest. This table only compares the number of events reported this year vs. previous years.

Example: Cardiac arrest was reported 71X more often than normal, but that risk is only elevated for an unknown amount of time.

For example, troponin levels only stay elevated (up to levels >10X that of heart attack levels) for a few months. D-dimer, troponin, and spike protein can be elevated for months after vaccination. This is not normal.

Dr. Peter McCullough would be delighted to talk to the press about actual patients, but the press isn’t interested in reporting on this.

### Symptom Table

multiply B/C by 5 since C is 5yr
multiply B/C by 4 since B is under-reported by 4X this year vs. previous years
NOTE: Limited to 20 to 60 age range in US (excludes foreign)
Need to multiply the COVID numbers by 41 to get true incidence rate
