

Vaccine injury survey comments

The comments below are taken **unedited** from the first 94 responses only to the [Vaccine Injury Survey](#).

The actual problem is at least 10,000 times greater than what is documented here. It could be 100,000 times greater. The [article](#) points out that there could be more than 10M vaccine injured in the US alone based on data from the Israeli government.

The CDC, FDA, and NIH do not want to know about any of the vaccine injured and they don't want you to know about them either.

You can [see all the response data here](#),

From the causality section

My injury was immediate and had to be taken to the hospital by ambulance.

Anaphylactic reaction immediately post vaccine. 17 days in hospital. 5 in ICU. Was not expected to survive. Legs swollen and went black, huge difficulty breathing.

Bells palsey for 3 days, 12"X6" rash on body side - never had anything like this before. Healthy female athlete.

My sister was a healthy 50 year old. Her employment at St. Alexuis hospital made the covid shot manatory. she got the first 9 /?/21 and her 2nd 10/15/21. She had to have her second shot by the 6th of dec. to be fully "vaccinated" We buried her on December 6, 2021. She passed away on Nov. 29, 2021. She was in and out of the ER the week she passed. They sent home each time she went in. She died at home.

Before My Heart was always 100%okay. after the Second jab, my heartbeat was unregular. I was unable to do sports, climb the stairs, carry heavy stuff without Feeling Like my Heart would explode. Could Not concentrate on anything. My doctor Said coincidence,but i die Not See another cause..

When her doctor was asked if the vaccine caused her illness, he said he would plead the 5th.

My reactions started immediately, got progressively worse and I included almost all my bodily organs and systems. I have never experienced these in my life before and NO BODY knows or tries to adress them. My list of symptoms easily is 50 if not more .

D. told me about her symptoms including her diagnosis from a doctor.

No signs ever before

"Baseline: atopic dermatitis during childhood with unknown exposures; cleared between age 20 and 25, no noteworthy acute attacks since then; hazel- and potentially other sorts of nuts seem to trigger attacks, but the threshold is high (a big handful of them every day is too much, but there was never a need to worry about hidden nuts in chocolate, cakes, or the like)

~1.5 months after 3rd jab: dermatitis returned with a hellish attack; several weeks of redness, flaking, soring and itching on large parts of upper body, left elbow, face and head; unmanageable itching and highly inconvenient pain during night time especially, ~3 weeks of almost complete sleep deprivation; the worst is under control with Cortisol cream; duration 4 months and no end in sight; unknown whether direct consequence of vaccine, but if not then indirect via triggering much fiercer reactions against immediate (known or unknown) exposures (no other explanation lends itself)"

She died of a blood clot

Very healthy middle aged woman experienced stroke and was hospitalized. Still impaired but not severely so.

Approx. 15 min after taking my first Moderna injection my arms became inflamed, my lungs began to burn, and for a very brief moment my throat slightly closed up and I couldn't swallow. The inflammation in my arms lasted approx 8 hrs. My lungs burned for at least a week, but laboring to breath with minimal exertion did not stop. When I went back for the second injection, I told them about my adverse reaction, and they told me I couldn't get the shot without my PCP authorizing it. She would not authorize the second injection. (I had already decided I wouldn't take another shot. I might be wrong, but I think it would probably kill me if I did.). The reaction was reported to VARS.

My symptoms occurred immediately after first hep b vaccine

Dad was very disabled but not expected to die. He visibly deteriorated after his Covid shot and continued to deteriorate.

I had a Guillian Barré syndrome- very severe muscle weakness in the legs after getting the Flu Shot in October 1992. I was not able to walk and go to the bathroom by myself for 1 week. I was lucky those symptoms went away.

My grandmother had congestive heart failure before the shots and would occasionally require a hospital visit when her symptoms would get bad. Post shot the amount of her hospital trips skyrocketed from a couple of times a year to every few weeks.

My friend developed Multiple sclerosis post shot. Symptoms have receded with treatment. Has been boosted with no further problems.

My lips break out with over 30 plus cold sores. I take medication daily to keep cold sores away. If I forget to take medication the cold sores start coming back.

these men were extremely healthy. definitely a temporal relationship

"My mom has leukemia but otherwise always active, healthy and strong. After the first vaccine both parents seemed listless and struggled to get out of bed. Few months later they get second shot and symptoms worsen. She is hospitalized because she faints and cannot breathe. Chest tightens. Cough worsens. Pain all over body. I beg her not to get booster. She doesn't believe me and is very fearful of covid due to propaganda. They tell their friends I'm unvaccinated and friends ask if I'm educated. I told them. Those same assholes will ask you how I knew a year from now. They race to get the booster and she faints and experiences similar problems- heart issues and blood clotting. Severe pain in side. Hospital keeps loading her up with more opioids but never does the obvious like get her walking, fresh air, healthy food. I felt like they wanted her to die. Easier, more profitable. I was disgusted and let them have it. We were flagged and they kicked us back to her assisted living home. She could not function. Then they said they made a mistake and sent her to rehab. Every time this happens I fly from Boston to take care of her and lose more of my income. They are evil people who started this pandemic - hell bent on depopulation. It is so obvious yet people will say she's just old. Her experiences were unusual and extreme - diarrhea, severe level 10 pain, heart issues (was given a heart monitor), breathing issues, chest pain, horrible cough that turned to pneumonia. The only good news is that when I left they told me they got the fourth booster email and decided not to get it!!!!"

Immunologist said my symptoms were a result of vaccine. He has seen over a hundred cases such as myself but said mine was a very bad case.

My mother suffered from chronic pulmonary disease so was already very sick. The day after her shot she said she felt noticeably worse and never recovered. Her breathing was worse than usual and she had a CT scan to check for blood clots when she was admitted to the hospital. I suspect microclots but this was March 2021 and no one knew to look for this at the time. She told me she felt like she was dying and did 15 days after the shot. I feel that this shot was the final straw that pushed her over the edge. I don't believe any doctor would agree this was from the shot since she had many comorbidities.

Timing of symptoms after the shot

6 days after shot he had multiple strokes from a blood clot. He never had blood clots before. Suffered some brain damage

she did not feel right day after 3rd shot. saw doctor later in the week no hx of htn. htn crisis readings responded to antihypertension meds. work up of systems not able to determine any cause. doctor admitted "rumor" could be related to shot. she will need to be on bp meds rest of her life. doc did not report to VERS that I am aware.

3 weeks after the 1 shot I recognized and discovered my left hand shaking (same arm as the shot) and 1 week after the shot I had already decided not doing another one ever . 2 mos after the shot I developed a case of diverticulitis (I knew from 5 years prior I have diverticulosis but had never had an infection). 2 more mos after the 1 st infection I developed a 2 nd infection. The 1 shot was in the 1 st week of Feb 2021. Once the warm weather started I couldn't take the heat outside very well or humidity. I went to the neurologist around May 2021 who diagnosed me with essential tremors. I clearly told him it was from the shot shot he recorded that info on my records for that date. The day of 1 st discovered the tremors I called my primary dr to report the shaking. I live with the tremors which comes and goes and I'm not working. I had already been laid off in Nov 2020 and about to file this year for my ss benefits since I'm turning 62 and not seeking employment at this time

Injury occurred as I was moving to north carolina. Went to experienced local ent who never even looked at my info. Just came in , asked me series of questions about problems and then asked if problems started approx 6 days after second modern a shot. Exactly matched my situation. Had not disclosed vaccination status or manufacturer to him. Told me had numerous similar cases many worse than me. Included college student who went deaf.. Never had these problems before.

He was of normal health before the vaccine. After dose 1 he felt so sick that he wished to die. After dose 2 (which he only got due to peer pressure) he was just as sick as dose 1, but this time suffered organ failure and was hospitalized for 2 weeks before passing away. The doctors said he had a bad reaction to the vaccine because of Diabetes.

My brother committed suicide due to severe tinnitus from booster shot. He couldn't function nor sleep which put him in a delusional state. He committed suicide.

"My mother was found unresponsive lying on floor by her bed, day after shot (Astra Zeneca). Mid Feb 2021. Recovered but developed suspected deep vein thrombosis in calf. District nurses recommended hospitalisation but she would not go in order to care for her husband (also jabbed and died within a month, but v frail before so possibly coincidental, though he lost all mobility post shot - going from walking up and down stairs multiple times a day, to requiring a surgical hoist to move, followed by hospitalisation and death via end of life pathway). Mother suffered a stroke when her husband was taken to hospital. Sudden aphasia - all nouns replaced by nonsense words. Unable to recognise anyone, including family, confused about whereabouts etc. DVT / swollen leg resolved possibly coincident with occurrence of stroke. Memory and speech returned nearly to levels before over 2 weeks. Has had sudden chest pains and feeling of being punched in chest intermittently "for the last year or so". Owing to my father's need for carers (2 pairs of carers per day), both had almost certainly already been exposed to SarsCov2 as isolation was impossible."

Even if I was anemic and normally have low blood pressure (90/70) I never experienced collapsing before. I collapsed 2 weeks after my 2nd dose. It was just less than a minute of

unconsciousness. I experienced to have continuous headsplitting headaches from 1st to 2nd dose. My pain tolerance is pretty high so I just tried to tolerate it during those days.

Perfectly healthy. After the second shot my blood platelets fell to near death levels. Had to go on super strong steroids for several months and have a platelet transfusion. I was literally 12-24 hours from bleeding out. Blood turned to water.

"Had NOS Dm
NOS Hyperthyroidism
Increased tremors "

I had migraines beginning within an hour of my first shot having no history of headaches. The migraines continued for days after that going forward. I would go to bed with a migraine, wake up in the middle of the night with a migraine, and wake up in the morning with a migraine. I was referred to a neurologist and had an MRI and started on Topomax. After my second shot, both my wrists began to hurt. I could not open my car door, push myself off the bed, or do a push-up. I went for x-rays and had bloodwork to rule out Rheumatoid Arthritis. Both were negative. I had a bone scan to rule out osteoporosis. It was normal. I was referred to a rheumatologist. I began to have pain throughout my body at this point. By the time I saw the rheumatologist in March, I was in head to toe pain. They said based on my symptoms, it sounded like fibromyalgia. I was started on gabapentin. That was 14 months ago. Since then, I have muscle weakness, fatigue, brain fog, memory problems, numbness and tingling in my hands and feet, balance problems, continued pain, continued migraines. I did not have any of these issues prior to my first shot.

This person was already sick with lupus of the kidneys at the time he was vaccinated. 3-4 weeks after the vaccine he developed breathing issues . It was originally thought that this was caused by the lupus, however an examination revealed that he now has permanent lung scarring and needs to do a breathing treatment using an nebulizer multiple times a day for the rest of his life. He is able to hold down a job but has trouble sleeping because of the breathing issues. His doctor said that lupus is not the culprit for scarring of the lungs, and basically admitted the vaccine to be the problem. Although he was diagnosed with lupus over a year ago he has never had any breathing troubles until 3 weeks after vaccination.

I had never experienced before any of the 5 adverse events that appeared after my first dose of vaccine.

"N had never had tinnitus he was a 19 year old kid. About 4 days after the second Pfizer shot, he complained of the ringing in his ears. He went to an ent, tried some medications. Nothing changed it it. The ent recommend a supplement and said he could find nothing wrong, he didn't know why he had tinnitus. It continues to this day. Also, n. Has developed gastro issues this past year, abdominal pain and bloating that is a new symptom and it has been hard to manage. All this out of nowhere, after 2 shots of Pfizer."

"My mother was perfectly healthy shop and cleaning her own house going out to dinner the first shot gave her migraines for three weeks so bad she had to be in bed the second shot made her dizzy and they brought her to the hospital where she spent 10 days and came out needing 24 hour care because she couldn't walk or talk or remember anything ..and she died three months later. Her doctor said she probably had an encephalitis from the Moderna shot"

I had new onset PVCs which started a few hours after my 2nd Pfizer shot and lasted for about 2.5 days. Eye pain/nose bleed was new onset about 8 weeks afterwards. Sean broke out in a rash soon after his vaccination and according to his dad, was not well afterwards. He died approx a month later- found deceased beside his bed. Autopsy report says COD undetermined. Father, Dan, hoping to get a second pathologist to assess Sean's tissues which remain with the Ontario Pathologist/ Coroner.

she was diagnosed with ocular myasthenia gravitas after the Vaccine

I work in healthcare so I am familiar with end stage illness. My aunt has lost 30-40 lbs in the last 5 months and looks wasted like an end stage cancer or HIV patient. She barely has an appetite, zero energy, has lost fat and can't sit on hard surfaces for more than a few minutes. She is a shell of her former self who was active, social and constantly on the go.

After jabs 1,2 my father developed breathlessness when walking or any exertion, which now seems permanent - but didnt report this to me until after jab 3. On jab 3 - within 48 hrs had serious reaction dizzy/fainting. Since then he has been coughing continuously - more than 6 months - at one point he needed to be hospitalised for couple days with low oxygen and chest infection - but still coughing couple months later. On my questioning he also admitted he was getting some swelling oedema around ankles. Cough plus breathless plus water retention swollen ankles makes me worry about possible heart failure type situation but I'm not sure how to get it diagnosed. I'm an engineer playing amateur dr trying to figure it out - having read reports by doctors of similar syndromes post vaccine (mRNA/spike damaged pulmonary blood vessels leading to pulmonary hypertension and right side progerssive heart failure). My father is retired professor of medicine but doesn't seem able to do much self diagnosis and still puts his faith in local GP and referred hospital drs - who don't seem to have diagnosed much so far. My brother feels there is some degree of cognitive decline also and my impression is overall decline.

"Headache, tinnitus and hives two weeks after mandated shot. The time period of two weeks indicates it's likely due to the vaccine as it seems to take that long to develop the antibody response. Etc.

<https://www.cureus.com/articles/69363-chronic-spontaneous-urticaria-after-covid-19-vaccine>

Issue is almost exactly as described in this article. Appears to be affecting many people. Hives still ongoing after 7 to 8 month since 2nd vaccine. Hives vary from night to night but make it very difficult to concentrate or sleep. Use of anti allergy medication (reactine) appears to mask symptoms but they come back if I don't take it every other day. Headaches started 2 weeks after 2nd Moderna dose and lasted almost 3 months after vaccination. I rarely get headaches so

having one post vaccination for 3 months straight was very telling. Always on the right side light to moderate. Headaches have subsided since. Tinnitus in right ear became more intense 2 weeks after 2nd Moderna dose. Most noticeable in the morning. A 2nd harmonic tone could be distinguished after vaccination. Has mostly subsided."

The blood pressure, muscle weakness and blood clotting all started after first vax, and then steadily got worse with each shot.

My husband has never had vertigo this bad or for the length of 4-6 weeks ever! It was intermittently debilitating for at least 4 solid weeks.

Previously healthy

My sister is type I diabetic and the doctors specifically said to her that the diabetes had nothing to do with her brain bleed or "subarachnoid hemorrhage". They said sometimes these things happen as a one off and the blood vessel will be absorbed by the body to full recovery.

The doctors at Kaiser knew immediately and told him he could file the claim. They would not.

She had never had a single health problem and was physically fit and active. Felt something was wrong with her heart and was told she was imagining it.

My son is 3 he was the healthiest baby, then after vaccines, he's sick all the time has missed half the year of school because of it, now he has asthma, allergies, frequent fevers for reason Dr.s can't figure out, his mood has changed possibly adhd, constant cough and wheezing and doctors believe may be immune compromised. I regret ever getting him any vaccines.

This is my second cousin who found she was struggling to breath. The found lesions all over her lungs and was then hospitalized, intubated then tested positive for Covid, organ failure and was classified as a Covid death.

This was a healthy young mid 60's man who danced regularly. He was found in his car after a night of dancing. Diagnosis: blood clots, stroke.

Very healthy and working before the shots. Was on no medication including blood pressure.

Coroner reported to family that Mr. Wilson died from an enlarged heart due to an adverse reaction to the COVID-19 vaccine.

"I did not answer what I do not know above for him but his contact with MDs and hospitals as in-patient or out-patient has been extensive, such as weekly. After his 1st Pfizer vax, he had headaches, nausea, stomach upset ongoing. After his 2nd Pfizer vax perhaps 5-6 weeks later, these symptoms intensified into vomiting, which later became kidney, liver, gallbladder, cardiac dysfunctions with atril fibrillation. His 3rd vax likely with 3 other vaxxes upped his atril fib.He informs me erroneously that these are not vaccine injuries as none of his doctors have told him

that, but that he's just up in age. Yet prior to the injuries, this man was so healthy that he took a swim around his lake almost every morning--a small lake but one that cannot be entirely seen from any one location when the weather was warm enough, but he has not done that since his 3 COVID-19 Pfizer vaccines one time. He has to stop multiple times now to go to his mailbox because he becomes severely SOB with enlarged heart, enlarged kidneys, enlarged liver, enlarged gallbladder that did not exist prior to his 1st Pfizer COVID vax. In 30 years of close friendship, he had one stroke in early 2019 (after vaccines) and was in rehab almost a month, but totally recovered. He had a history of 60 years on betablocker without problems to reduce blood pressure triggered by anxiety surges, which was changed after this in 2019 to an ACE inhibitor. He was also left on a statin when his cholesterol became abnormal low, because he does not question his doctors. He had prior open angle glaucoma lazer surgeries and may have Rx eye drops. He had a diabetes Dx with Rx metformin. Other than that, he had perfect health. After his 2nd Pfizer vax, he developed severe heart issues, quickly within about the first week or as his MD ordered extensive labs/tests as a result. Images he claimed showed zip. His MDs did extensive lab work including troponin and the other common accompanying test that slips my memory which is being used to Dx vaccine-induced abnormal microclots that do not show up on images. These 2 tests were positive at very high levels, he told me, asking me what they measured. By ordering these labs, I believe his MDs must silently know he is COVID vax-injured, but are not admitting it to him. Instead, they had him take the 3rd jab, a pneumonia jab, a flu jab, and shingles jab, apparently all on the same day, after which he became sicker, but stubbornly wouldn't consider the obvious cause and effect, because his MDs didn't connect the dots verbally to him. He does not inform me of everything, so I remain uninformed about many problems he developed after the Pfizer vaxxes, but our entire conversations every time we talk on the phone are about his unending medical conditions and growing diagnoses with reports of just coming out of the hospital or scheduled to return to the hospital in a couple days. He has been in the hospital or to see his MD about every other week since April 2021, either for testing, observation, surgeries, other treatments. He has had multiple organ dysfunction with enlargements--kidneys, liver, gallbladder, and heart. First, great concern existed over his kidneys due to bad lab tests. He was hospitalized for gallbladder removal, but then they didn't do it. His heart was malfunctioning with extreme variable BP, sometimes very high and then dangerously low down into the 30s out-of-control. Atrial fib was severely frightening him. He was going to get a pace-maker but then they decided to shock his heart, after which he felt better, but if the atrial fib does not resolve after 4 shocks to his heart, they want to give him a pace-maker. He has bleeding in the back of his eyes, and reports that he requires 4 lazer surgeries in hopes to stop it, and one has been performed with bleeding continuing. His history contains open-angled glaucoma, but his numbers are decent 15-17 but meaningless to potential damage. I suspect damage from being jabbed to high and strong by a 3rd party administering COVID PCR tests almost weekly as required by his hospital system. He has been scheduled for surgery a couple times, but after he's there, he claims the team changes their mind about the plan. His voice has changed so much that most of the time I would not know it is him I'm speaking to except that I called him. His voice is filled with fear and anxiety that comes in fast surges. This never happened prior to the Pfizer COVID vaxxes. His personality has changed. He is no longer the calm, relationship-focused person exuding intelligence that he was just before the 2nd COVID vax. As a person who never was sick, never got the flu, suddenly he

went from a top-notch healthy 80-year old with extraordinary physical strength and capacities into having long-term unending flu-like symptoms immediately after the first jab. He obediently rolled up his sleeve to have the 2nd jab before his flu-like symptoms had disappeared from the 1st jab. Within a week or two, extensive lab work including troponin had been ordered and he was showing symptoms of pending organ failures--kidney and heart first. As 2021 progressed and into 2022, he has progressively went down hill."

"Marilyn had clear chest imaging in June/July 2021. Then had Pfizer booster AND flu shot administered on 10/09/2021. Became very ill - fatigue, nausea, malaise - for 10 days immediately following. November 2021 she had what appeared to be stroke symptoms, right side leg and arm weakness and inability to write with minor speech issues. Imaging indicated ""did not meet stroke protocol"" according to hospital. At that time she was hospitalized for approximately 10 days. Subsequent testing revealed malignancy in brain, liver, lungs and biopsy supported TWO forms of very rare aggressive lung cancer metastasized to brain and liver. Terminal diagnosis. She had 10 radiation treatments throughout November/December 2021. Subsequent scans in January showed that existing tumor growth had slowed down but significant growth in additional areas had appeared. On 12/27/2021 (+/- day) Marilyn was staying with family and was found unresponsive with respiration of approximately 70. She was taken by ambulance to hospital and admitted. Testing the following week indicated encephalitis. She was given a spinal tap on 12/31/2021 and was treated for the encephalitis. Became responsive with cognitive ability to understand but minimal ability to respond on Sunday, January 02, 2022. On Wednesday, January 05, 2022 family met with palliative care MD and decision was made to send Marilyn home with hospice care. Hospital agreed to wait 48 hours before discharge so family could prepare. On Wednesday afternoon, hospital administered a ""random COVID test"" and they allege it came back positive. At this point, Marilyn had had minimal fluids and no food since admit. She was not in any pain or discomfort at this point. Hospitalist convinced present family member that patient would have to be moved to COVID floor and would benefit from Remdesivir treatments. At this point family members were advised she had 5 to 10 days to live and they were scrambling to prepare hospice arrangements for her. What occurred on the hospital COVID floor is unclear as no one was allowed to see her. Family was told that during the administration of the 3rd dose of Remdesivir she quit breathing. Due to advanced directive no attempt to intervene was made and she subsequently passed away on Saturday, January 08, 2022 at approximately 5:30 p.m. PST."

"My mom's was a bit sick, like a flue, when she got the first jab. The were strict at the retirement home, and put preassure on residencecto take it. Her health deteriorated after the first jab, she needed oxygen, was hospitalised, and recovered after a bit of medicine and went without oxygen for days, after the second jab, she struggled with swallowing, never stopped coughing, was week and was hospitalized again. dr thought it was cancer, she ended up in icu, nowxafter a year of the first hab, she now has permanent lung damage, a lump in her lungs, and is to week to be sent dor biopsy's She is on 18 hours oxygen over day now, and had 80% lung capacity and fibrosis. She was independent and active before the jab, now she can only do very basic things before she is too tired"

"I was a perfectly healthy 37 year old mother prior to Pfizer jabs. After my second shot I developed never before heavy menstrual bleeding for a few months. Cycle has now returned to baseline. 6 months post jabs I developed chest pain. Began seeing my pcp who wasn't sure. I was referred to cardiologist form work, who I quote ""Wow what are all the nurses ok your unit doing coming to see me?"" I said why don't you tell me! He denied that jabs could be an issue. That doctor was former ucsc professor and toxicology head (really quite shocking his levels of cognitive dissonance). He retired December 2021. I obtained a new cardiologist - had more cardiac test - this new cardiologist has acknowledged my V injured and diagnosed me with myocarditis &/or pericarditis. I've also had hair loss which has not stabilized, hematuria & bloody stools. The only pmhx I have is - giving birth to two healthy children and raynauds phenomenon. My health issues only started after making this horrible decision and going against my intuition. I volunteer with American Frontline Nurses and advocate for the injured and offer consulting to people who need help navigating the corrupt healthcare system. Please let me know how I can assist in anyway. I'm vocal and have nothing to hide. They must be exposed and stopped. "

She never had any symptoms that led to her constant hospitalizations until after taking the shots Perfectly healthy, died less than 2 months following booster 1. Collapsed and died. Death certificate read death due to sepsis and he was NOT covid positive. It started soon after 2nd shot.

Developed cancer within 2 months of 2nd Pfizer dose (3/29/2021). Diagnosed at 6 months after 2nd dose, September 2021. Surgery to remove liver tumor 12/2021, complication from surgery caused bowel obstruction 2/1/2022, which I am still recovering from 5/28/2022.

sudden onset of trembling, fatigue and weakness in right hand/ upper extremity after the CVS pfizer booster shot in her right arm.

"I live in Melbourne Australia. We have the harshest lockdown laws in the Australia & possibly the world. I Had my first Pfizer shot on 14th Oct 2021. I did not want it, I felt coerced but had no choice as I would not be able to work. We have a big mortgage. 24 hours after the jab, I lost vision in my left eye and I developed chest pains, weakness, dizziness and shortness of breath. I nearly crashed the car. My optometrist confirmed that I did suffer a loss in my vision. I was sent for multiple tests for cardiac issues which all turned out to be normal but I was still having random chest pains. Had 3 d-dimers test which showed above normal results on days 6, 7 and 30 after the jab. On day 30, the d-dimer had nearly doubled the first result so my GP sent me for a VQ scan which showed pulmonary emboli. She told me to admit myself to an emergency department of a hospital. I was given two doses of 50mg of Clexane (Enoxaparin) The Pulmonary Specialist at the hospital scoffed at my VQ scan & d-dimer because my oxygen sats were around 95-98% and I had minimal pain. He discharged me but gave me a script for 6 months of Apixaban anyway, My GP also sent me for many pathology tests. She was able to rule out any predisposition to clots. She said it had to be the Pfizer shot which caused the PE. She submitted my vax injury to TGA. Six months later, when my Apixaban script was about to run out, my GP sent me for another VQ scan which showed minimal change to the pulmonary emboli. She felt she had to refer me to a another pulmonologist. This one also made me feel like

I was fabricating the whole thing but he did present my case to a panel of specialist physicians. Luckily for me, the chief radiologist of a hospital whose expertise is mainly in lung radiology confirmed that my PE were legitimate. The lung specialist has now ordered CTPA scan with higher contrast load to see if there are larger clots and to see whether I should get off the Apixaban. I tried to stop Apixaban but on the 7th of not having Apixaban, I lost some more vision which has been confirmed by the optometrist. In addition, three days after stopping the Apixaban, the pains in my lungs returned "

I thought that I was having a stroke after both injections, as my entire left side cramped and was weakened at about 1 hour after the vaccination in both instances. I was very sick for three days and was at a greatly reduced capacity for another week thereafter. I have struggled to have energy ever since, though I seem to begin improving after about 8 months. My left arm, at the injection site experienced pain from the time of the vaccination and it continued to grow worse. 14 months after the vaccination, I am receiving physical therapy and my range of motion is still limited, with aching pain at many times and severe pain when extending my left arm.

Perfectly healthy 24 year old male died in his sleep less than 24 hrs after Pfizer. Unsure if dose one or 2; was in June 2021.

"My friend started to feel shortness of breath and irregular heartbeat after 2nd dose of Pfizer in May 2021. In Dec 2021, he took the 3rd dose of Pfizer and the symptoms got worse. In addition to the previous symptoms, he started to have chest pain. He thought he might have acid reflex so he took some medication. In Feb 2022, he had an appt with a cardiologist and the dr ordered a cardiac stress test. On 2/10/2022, he took the stress test at the dr's office which is two mins from Good Samaritan hospital in San Jose CA. He finished the stress test and collapsed right after. He was sent to ER and passes away right after. My friend used to run half marathon and was in good health in general. He complained more severe shortness of breath starting in Dec 2021 and couldn't run afterwards. "

One month after Moderna booster (1st dose was jnj), skin rash started on neck and gradually expanded to chest and belly, arm and legs. I never had eczema before. Frankly speaking, I never visited any dermatologist in 30 years. Hair loss was also happening one month after booster. Dr said it might be due to pressure. Both symptoms occurred together and bothered me for three months and magically they stopped at the same time. I strongly believed they were caused by the vaccine

- Headaches within 3 days of first vaccine dose, severe enough to warrant a visit to emergency department as I was vaccinated with Astra Zeneca and there was the whole blood clot concern
- Almost continuous genital herpes previously once in a blue moon.
- Developed interstitial cystitis

Spike protein and nanolipid particle mediated inflammation

All of the symptoms started after my vaccine and every doctor I have seen have said it's from the vaccine. I have been diagnosed with Pericarditis, POTS, Small Fibre Neuropathy and blood clots.

"My initial symptoms started 12 minutes after dose 1. I was taken in ambulance to ER. Multiple visits to ER followed and was told I was fine despite chest pain and tachycardia, and to have second dose. Delayed dose 2 a few weeks til symptoms somewhat improved. 4 days after dose 2 it all started again worse this time. Have been diagnosed with suspected pericarditis and POTS by cardiologist. I have subsequently had blood gases tested with very low SV02 and am on the following medications:

Colchicine

Beta blocker

Did short course prednisone

Fludrocortisone

Statin

Plavix

Aspirin

Lots of supplements "

Person for and no medical conditions. Jogging after vax and had severe stroke

It came out of nowhere 1 to 2 months after 2nd vaccination.

Bullous pemphigoid - never had anything like it before

burning 6 days after shot

4 months after 2nd dose, memory started failing. Then went from running 5 miles every day to waking up in full seizure for 5 minutes. Ambulance ride to hospital to reveal meningio encephalitis and was put on antibiotics ran through line in vein to heart. Brain infection so bad he should be dead. Before that happened he was perfectly healthy and zero medication ever.

My doctor of over 30 years stated that he was convinced my heart attacks were a result of the vaccine. My calcium markers prior to heart attacks was 13, indicating very low plaque and no risk of heart attack. I had three heart attacks in a four month period from blood clots in spite of placement of three stints. This occurred three months after the vaccine. One month later I had another heart attack and two months later a third. One stint clotted twice after placement requiring two blood thinners to prevent further clotting. My ejection fraction is 30. Prior to the vaccine I was healthy with no prior heart problems. Because staying on two blood thinners is too risky, on August 1 the cardiologist is going to discontinue Brilanta but I will be permanently on Xarelto and Asperin and hope discontinuing the Brilanta will not cause another clot to form.

Sudden onset of highly unusual symptoms on receipt of vaccination. Severe stroke occurred several days later. No other differences in lifestyle/medication etc. Couldn't see a GP in time.

Extremely lucky to be found and taken to hospital, just in time. **Had operation to remove large clot in brain.**

Negative N tests, been verified as vaccine injury by multiple drs

Happened 2 days after and had never happened before booster

Never had any health condition **my kidney is damaged** I went from zero protein in my urine to 433 in 5 days. I now am allergic to many foods which elevate my blood pressure to stroke levels. My blood pressure 10days before was 110/70 after 211/105 stayed horrible for 5 months

Mom had existing pre-conditions of kidney disease (dialysis) and diabetes. Took the jab, a week later her toes on left foot starting turning dark, and then to blackish, was rushed to hospital and had **emergency amputation above the knee**. Due to other conditions, osteoporosis in lower back, she lost mobility, had pain when she moved, and lost her will to live. She died less than three months after amputation.

Marsha Gee 37F Full Code, No Allergies. ICU RN.

THE DAY I GOT VACCINATED

I STARTED TO DIE.

PLEASE HELP.

HX: PFIZER VACCINE 12/16/2020

Covid (+) 12/24/2022

1. Neurology

Brain Fog. Multiple Migraines. Short term memory loss. Freq. Headaches. Inability to comprehend basic things. Difficulty word finding. Tinnitus. Tremors. Nystagmus. Vertigo. Decreased balance, Dizzy spells. s/p multiple falls. Facial Parasthesia. Neuropathy. Fatigue/malaise. Low grade temps. Internal shocks. Muscle spasms/cramps. Insomnia. Post exertional Malaise. Nightsweats (Hyperhidrosis x1 week during covid+) Hair Loss. Photophobia. Light and sound sensitivity.

A. Post Vax- Bedrest 15days. 105 fever, parenthesis. Bell's palsy. 30lb weight loss. (145lb – 115lb)

B. Covid + Bedrest 14days. 104.5 fever, mult days. 15lb weight loss. (135lb – 120lb)

C. MRI – Normal (results?)

i. Post covid infection, many neuro symptoms improved but did not fully stop

*Small Fiber Neuropathy – No Biopsy needed per sharp md

Dysautonomia?

2. PAIN

D. Peripheral

i. Hands and Feet - Ice Cold Blue to Swollen Red Hot

ii. Arthritic Joint

iii. Muscular stiffness – Exercise intolerance. inability to tolerate activity. Burning.

E. Central

i. Nerve Pain to extremities – wakes at night

- ii. Migraines / Headaches
- iii. Enlarged Lymph Nodes

- 1. Facial and Cervical
- 2. Jaw pain, edema, TMJ

Skin

- i. Numb , Painful, Burning, Aching, Sensitive.
- ii. Not healing appropriately

Gabapentin 100mg PRN (not used, too drwosy).

Topical Clobetasol, steroids, lidocaine, tacro

Perniosis / Chilblains / SLE / Raynauds Phenomenon

2. CARDIOLOGY

Chest pain / Palpitations / Freq. PVCs

New Onset Tachycardia (Sleep HR 50, Now 100, Rest HR 60-80 now 100-120)

SVT 220s x3 episodes (2021)

Hypotension s/p multiple syncopal events.

Bradycardia – (during Covid+ symptomatic N/V 120 down to 40s)

On Flight Brady event HR 120-20. Loss of Consciousness. (Vagal event? Pale, cold sweats, nauseous vomiting)

A. EKG – Tachy

B. ECHO – Norm (?)

C. 14day Holter Monitor (findings?)

D. Carotid U/S – Norm (?)

Beta Blocker : Propranolol 10mg BID

POTS / pSVT / Tachycardia

3. RESPIRATORY

A. Shortness of Breath (linked with cards palpitations)

B. Lightheadedness/ blackouts/ fatigue

C. NO cough, No Pulmonary problems through Covid

D. OXYGEN EXCHANGE (?) not optimal

i. CBC results now Out of Range

1. Anemia (Hgb 14 down to 9)

2. Neutropenia (WBC <4)

3. High RDW % ?

4. HEENT

A. Hair loss – severe, stopped after covid+

B. Tinnitus –

i. Inner Ear Series –increased sensitivity to movement

C. Facial edema / Large Lymph nodes.

D. Dry Eyes / Dry Mouth (Sjorgens syndrome?)

E. Loss of Vision

i. Blurry vision at times

ii. With Exertion

1. Optometrist -Left Atrophied, Right hemorrhage and emboli

2. Ophthalmology- some loss of visual field

3. Neuro-ophthomalogy –

OCCULAR MIGRAINES – VISION LOSS WITH AND WITHOUT HA.

5. GU/GI – BASELINE WT 145-150.

A. Nausea / Vomiting / Diarrhea – 30lb weight loss

B. Bleeding Hemorrhoids internal – prolapsed

C. Severe Reflux. No appetite

D. Abdominal cramping

i. Severe when flares – Syncopal and Vagal Events – N/V/D – Loss of Consciousness in bathroom multiple times.

E. Chronic Diarrhea 3-5x BM/day

F. DIET – 0 Nightshades + High Sodium + Low Histamine

PPI – Protonix 40mg Daily . Pepcid 20mg BID

GERD

VASCULAR/CIRCULATION

A. GYN – Heavy Menses, Increased abdominal cramps, bladder spasms, Large blood Clots

i. U/S – Uterine Polyps

1. PLAN = Hysteroscopy July 6th 2022.

B. APS – Elevated Cardiolipin labs

i. Evidence of microemboli to digits

ii. (?) optic artery emboli (R)

ASA325 Daily (blood thinner)

C. Raynauds Phenomenon & Livido Reticularis

Cialis (Vasodilator)

7. SKIN

A. Hyperpigmentation – facial, nailbeds

B. Wounds - slow healing – chilblain lesions.

C. Freq Flushing, Hives, rashes full body.

D. Bruising

E. Dusky digits

F. Blood blisters, pustules,

G. Petechia, red dots, brown dots

H. Livido reticularis

Biopsy x2: MSSA+ / Perniosis / Chilblains

RECENT UPDATES : March – May 2022

March - multiple Migraines , new food allergies

April – Died on Flight. HR 120 – 20bpm , LOC <2mins. Hypotensive. Vagal response to acute abdominal pain/bladder spasms?.

May – stuck in Fight or Flight again! 1wk. Increase tachycardia/palpitations. Pale face and cold sweats. Poor memory, blurry vision, increase tinnitus and tremors. No appetite, Weight loss, dry mouth and eyes. Dusky blue extremities, livido reticularis. Thoughts racing, Anxiety increase, POTs exacerbation and shortness of breath.

From the additional comments section

The hospital said that it was a vaccine reaction on admission.

Thank you for Helling and trying to protect people

My sister who died a month ago was the care giver to my 96 year old mom. Now that duty is left for me to do.

Please get it out there, find us a solid diagnosis and treatment ...

I've sent your survey to the injured person hoping she will provide her name for you. She works was diagnosed with Epstein Barr post jabs. I know many more injured in the USA and other countries who either refuse to acknowledge the injury or have genuine fears of public exposure. Your survey should include an ability to give a semi- anonymous report such as I have made. I realize that would make your survey results less compelling for some critics but getting more data collected anonymously now is better than less data for a first round of this kind of data collection.

These genocidal vacine shld be stopped & people conspiring to get people vaccinated shld be killed

There is no safe vaccines. The damaging effects of aluminum nanoparticles in vaccines :
<https://www.dailymotion.com/video/x7z16ds>"

I have many clients who have died or been severely injured from vaccine but we are in Massachusetts and everyone will justify the death or injury and not Connect to vaccine. Keep That in mind - they would never complete this questionnaire. For instance my son's best friend died a week after a car accident where he had no injuries and never went to hospital. He died 9 days later. Everyone blamed car. He was 24.

Please send feedback with study results

Thank you for all your efforts to abolish these abominable shots.

I took the shot yet fearing it and fearing Covid. I came down with cold like symptoms 6 weeks after the shot and went to my primary care doctor and agreed to a Covid test 2 swabs and I tested positive . I feared the anaphylactic risk because I am severely allergic wasps. The day before the shot I had a physical discussed the shot and because of my existing high blood pressure I've had for many years was advised I'm in a higher risk for Covid and had a sister in Swiss who had been put on a vent for a bad case. She miraculously survived the ventilator after on it 4 weeks. The same day of my physical the nurse practitioner whom did my physical we discussed when I should go to the cardiologist for a routine check up. The np suggested she

could do an ekg and I had one and was diagnosed with a double heartbeat I forget the medical term. She told me not to be alarmed and advised again I am ok to have the shot. Very soon after the tremors appeared I learned more and more and more info about the poisons in them. I learned as well that the virus was never actually isolated and that the pcr tests were not accurate or able to truly detect a Covid virus. I refused the drug the neurologist wanted to prescribe me after learning all the risks of it. He had told me I would have the tremors for life that can progressively worsen as well. He ruled out Parkinson's as well. My mother now deceased since 2011 had developed Parkinson's many years prior to her death. Many friends and family I got opinions on how they felt on taking the shot. Many said they would not but many said they would and did. Many of the people who did take the shots also didn't really believe me about my tremors . I had also read in my massive research partly from gab and later on telegram of so much info including a study done in another country cannot remember for sure but might have been Israel that the neurological issues included essential tremors. I have been taking all kinds of supplements even before the shot and I continue to take many and I make homemade hydroxychloriquine and I purchased ivermectin from a feed store if I need to use it I take a dandelion root supplement daily starting several months ago having learned of the benefits. I've had 2 major sinus cough infections since the shot and 1 of those times I did see my new primary care dr different provider than the one before. During the 2 nd sinus infection I took a little of the ivermectin and sipped daily a little bit of my homemade hydroxychloriquine and I had a good cough med still leftover from the 1 st infection if I needed to take it. Sorry so long. I am thankful I woke up and am still alive yet knowing my life maybe shortened than what it might have been. I was so enraged at times after the shot and increased excitement and heart rate at times which increases the tremors so I do my best to not get upset over things that might make me upset. I minimize caffeine having maybe 2 small cups of coffee per day, No sodas had stopped those many years ago and no fake sugars had stopped those many many years ago as well.

Hope this helps many out there with real problems

Thank you for your work. Read the prophecies of the bible and quran, we are in the end of days.

Has Huntington's disease as a baseline illness. Rapid decline in motor symptoms. Asked Neurologist as he said that it wasn't sure. HD progression is slow. His CAG is 41. I didn't get vaccinated and I am gene positive and I haven't had the same rapid decline.

I just want to say it's the saddest thing I've ever seen in my whole life my mother was beautiful and vibrant and healthy and drove her own car and did 4 crossword puzzles every morning before 8 o'clock And went out to dinner with friends she was a master bridge player and a painter

Steve, are you able to get Dan (Sean'd dad) in touch with Dr Ryan Cole? Would very much appreciate a second opinion on Sean's COD. Thank you.

she was healthy enough to be a zumba instructor and still does with steriod treatment for her ailment

Add wasting as a symptom

"I work for an airline in Canada. Through casual questioning of coworkers I have heard of many possible reactions to the vaccine.

- 3 people with cardiac related events during vaccination (1 reported 20 to 30 bpm elevated resting heart rate for several days,
- 1 reported strong heartburn/chest pain sensation on each Moderna dose.
- 1 reported heart rate rising to 170 bpm for many hours after 2nd pfizer).
- 1 person neurological perhaps anaphylaxis event resulting in a tingling sensation in arm adter vaccination.
- 2 people with myocarditis.
- 1 person on disability with a blood clot (likely from a booster dose)
- 1 person describes joint pain, swelling and inflammation after j&j shot. Currently unresolved.
- 2 people developed vertigo and were placed on disability.

Hope you guys get the word out to any that'll listen!"

Send me future surveys

What we put in our body should be a God given choice of our own not for the government to force on any one. That is just wrong. It has cost children their lives. What if it was your child I'd like to tell them. We are not cattle and it is not a one size fits all for vaccines. This is fact and no scientific evidence could ever convince me otherwise

good surveythank you...i do know someone who is vaccine injured but there was not place to add this person

Family member who the coroner reported the cause of death to informed me.

I'm certain Jerome has extensive new diagnoses of which he has not informed me. I'm certain he only has disclosed to me his most frightening experiences.

Thank You Very Much for what you are doing to record these injuries for so many.

The dr said he thinks she had covid already when she took the jab, and this is what caused her lung problem.

Many nurses on my unit have suffered severe adverse reactions. I have a fellow nurse who is severely impacted cardiac wise from Pfizer jabs. Other nurses very sick too. I have a cluster of injured nurses from my old job. I'm willing to speak out and publicly. I have gone on local cbs8 news against mandates and about my injury.

Deceased was my brother-in-law.

I have no history of any prior cancers and I am 66 years old. I want my health back. I want to prevent others from being injured.

We must stop all vaccine mandates around the world. Where there is risk there must be choice! I waited ten months prior to seeing a cardiologist, but, prior to that, feel that I likely had myocarditis that subsided over time.

I have no additional info. No one is talking

We are not sure if there is any wrongdoing on the cardiologist side. The Santa Clara county refused to do an autopsy. my friend's family decided to bury him without an autopsy due to long waiting time for private autopsy.

My health professional is a Naturopath, my injuries are consistent with many of her other clients.

I'm a family medicine physician in a remote rural area. This is one of many patients that I have successfully treated, though not definitively cured, for CoVID vaccine mediated injury. This patient was diagnosed with polymyalgia rheumatica several months after his last dose. I have many cases to share. Most people however do not want to be reported. But I can speak about them anonymously. Feel free to reach out for more information.

I hope this survey helps to bring awareness to the governments/medical community of what is happening. Seeking help initially was infuriating as I kept being told I was anxious and having panic attacks. Mandates in Australia to have subsequent doses of Covid vaccine after initial injury is negligent and in my opinion criminal.

People are dying but no one will say its connected to the vax

I had severe chest pain and went to emergency room two days before my first heart attack. The emergency room doctor ruled out a heart attack. The next day I went to my doctor. He was convinced the pain was gastrointestinal and a reaction to medicine change because he said based on my medical history it could not be heart problems. Two days later I had a heart attack with blockages requiring three stints. If the stints block again I will have to have bypass.

Given feedback to help and so important to record these events. We need them investigated. Some questions above not relevant as the subject is in the UK.

Please help. UCSD has medically separated me from their hospital due to my disabilities... I was honored to be the first nurse at ucSD to get vaccinated... and they've turned their backs on me since that very first day. They still believe in "no adverse reactions" from this Pfizer COVID vax. I started dying that day... and I'm still continuing to fight for my life 17months later. Thank you.

I am reporting an old friends husbands injury. They are public about his disease yet will not acknowledge the connection to the covid shot. He received the shot and shortly after lost the ability to walk, talk, feed himself and breath. He spent 3 1/2 months in the hospital. Some of that time was on a ventilator. He is now able to walk with a walker and has recently gained the ability to hold his children.
